

Vertical Communication Antenna

This is a vertical antenna designed for receiving and transmitting radio signals. It appears to be a multi-element antenna, possibly for VHF or UHF frequencies.

Product Overview

High-Performance Vertical Communication Antenna

This vertical communication antenna is engineered for reliable signal reception and transmission. Featuring a robust, cylindrical design with a distinctive black cap and silver-colored base, it is optimized for clear communication performance. Its multi-element construction makes it an ideal solution for VHF or UHF frequency requirements in professional and amateur radio applications.

Technical Specifications

Model Identifier	JBA-8200
Antenna Type	Vertical
Design Features	Multi-element, Cylindrical, Silver-colored base, Black cap

Usage

Primary Applications

- Signal reception
- Signal transmission
- VHF frequency communication
- UHF frequency communication
- Amateur radio
