

Vertical Drilling Machine

The vertical drilling machine is designed for precision drilling in metalworking. Its robust box-type construction ensures stability and reduces vibration for accurate, consistent results.

Overview

Universal Vertical Drilling Machine

This square-column vertical drilling machine is a versatile, general-purpose tool designed for a wide range of metalworking applications including drilling, counter-sinking, spot-facing, tapping, boring, and reaming. It features a high-efficiency automatic reversing device specifically optimized for tapping blind and determined holes. With centralized controls, low noise operation, and robust construction, it offers high accuracy and ease of maintenance for both small-batch and high-volume production environments.

Key Features

Operational Advantages

- Automatic reversing device for tapping
- Centralized control panel
- Wide range of variable speeds
- Low noise operation
- High accuracy and efficiency

Machining Functions

Drilling, Counter-sinking, Spot-facing, Tapping, Boring, Reaming

Technical Specifications

Model Series

ZS140A • ZS5140A • ZS5150A

Design Type

Square-column box-type construction
