

Vertical Form-Fill-Seal Packaging Machine

This vertical form-fill-seal (VFFS) packaging machine automates packaging processes. It features a film roll holder, volumetric filling system, control panel, and sealing mechanism for forming and sealing bags.

Overview

Automated VFFS Packaging Solution

This Vertical Form-Fill-Seal (VFFS) packaging machine is engineered for high-speed automated packaging processes. It features a robust design with an integrated volumetric filling system and a conical hopper, ensuring consistent and precise product dispensing. Mounted on mobile wheels, this unit offers flexibility for various production floor layouts while maintaining reliable sealing performance.

Technical Specifications

Filling System	Volumetric filling with conical hopper
Mobility	Yes
Key Features	Automated Process, High-Speed Packaging, Integrated Control Panel, Mobile Design

Operational Controls

Interface	Integrated control panel with manual switches and gauges
