

# Vertical Form-Fill-Seal Packaging Machine with Multi-Head Weigher

This vertical form-fill-seal (VFFS) packaging machine integrates a multi-head weigher for accurate dispensing. It automatically forms, fills, and seals bags for granular and solid products.

## Overview

### High-Efficiency Automated Packaging

This vertical form-fill-seal (VFFS) machine features an integrated multi-head weigher, designed for high-precision packaging of solid and granular materials. Engineered for reliability, it utilizes intelligent temperature control to ensure consistent, high-quality seals on every bag. Built to meet rigorous national standards, this automated system provides a durable and hygienic solution for food processing environments, successfully serving markets across Europe.

## Technical Capabilities

### Key Features

- Integrated multi-head weigher (10-14 heads)
- Intelligent temperature control system
- Automated Z-bucket conveyor product elevation
- High-precision vertical form-fill-seal operation
- Stainless steel construction for hygiene

### Performance Metrics

**14 heads**

Max Weighing Heads

### Suitable Applications

Candy, Confectionery, Chocolate, Granular Solids, Snacks, Grains, Nuts

## Compliance & Quality

### Compliance

National Standard Compliant • Export Quality
