

Vertical Honing Machine for Internal Bores

This compact vertical honing machine is designed for precision internal finishing of bores. It features a rigid frame, adjustable stroke length, and variable spindle speed for optimal material removal.

Product Overview

Precision Internal Honing Solution

The 3MB9808 is a compact vertical honing machine specifically engineered for precision internal finishing of engine cylinders in automobiles, motorcycles, and tractors. It features a rigid frame construction that ensures stability and consistent cutting performance during operation. The system offers versatile manual and motor-operated controls to suit various technical requirements.

Technical Specifications

Switching Precision	0.4 mm
Operating Modes	Manual, Motorized

Applications

Compatible Components

- Automobile Engine Cylinders
- Motorcycle Engine Cylinders
- Tractor Engine Cylinders
- General Machine Tool Components

Design Features

Key Features

Compact Frame • Small Volume • High Rigidity • Efficient Material Removal
