

# Vertical Injection Molding Machine

This vertical injection molding machine is designed for precision molding of plastic and rubber parts. It features a programmable control system, hydraulic clamping mechanism, and a compact footprint.

## Overview

### Precision Vertical Molding Solution

This vertical injection molding machine is engineered for the precise manufacturing of plastic and rubber components. Featuring a robust hydraulic clamping mechanism and a programmable control system, it delivers high accuracy and repeatability for small to medium-sized parts. Its compact footprint makes it an efficient choice for facilities requiring intricate designs and tight manufacturing tolerances.

## Technical Specifications

### Locking Force

**55 ton**

Locking Force

Injection Weight	105 g
Screw Diameter	32 mm
Mold Size	425 x 380 mm

## Electrical Requirements

Power Rating	7.5 KW
Voltage & Phase	380V / 3 Phase
