

Vertical Inline Centrifugal Pump for Fluid Transfer

This single-stage, single-suction vertical pump is designed for efficient fluid transfer. The vertical inline design saves space and simplifies installation.

Product Overview

Efficient Vertical Pipeline Design

The ISG series is a single-stage, single-suction vertical pipeline centrifugal pump engineered for reliable fluid transfer. Its vertical inline design saves significant installation space while simplifying the plumbing layout. Built for durability and long-term operation, this pump is ideal for water supply, irrigation systems, and various industrial fluid handling processes.

Technical Specifications

Pump Configuration	Single-stage, single-suction
Design Style	Vertical Inline

Key Features

Performance Highlights

Space-saving • High Hydraulic Efficiency • Low Maintenance

Primary Applications	Water Supply, Irrigation, Industrial Processes
