

Vertical Insulating Glass Production Line with Roller Press

This machine is designed for producing insulating glass and includes a vertical glass cleaner, layer covering machine, roller press, and roll over table. It performs washing, drying, and aluminum frame positioning.

Overview

Professional Insulating Glass Production

This Vertical Insulating Glass Production Line is engineered for the efficient manufacturing of high-quality double and triple glazed units. It seamlessly integrates washing, drying, assembly, and pressing functions into a single, automated workflow. Equipped with a precision roller press system and PLC-based process control, this solution is ideal for high-volume environments seeking consistent output and optimized labor costs.

Technical Specifications

Model Number	GPLG-XY1800
Input Power	17.5 KW
Input Voltage	380V/50Hz
Travel Speed	8-15 m/min

Capabilities

Glass Thickness Range	3-10 mm
Max Glass Size	1800-2500 mm
Key Features	Roller Press System, Automatic Thickness Adjustment, PLC Control, Washing & Drying, Assembly Integration

Dimensions

Overall Dimensions	17500 × 2350 × 3000 mm
