

Vertical Laminating Machine

This laminating machine features a compact structure and ensures smooth operation with ultra-high precision. Suitable for processing water-based, oil-based, thermal lamination film and glueless film, it can be used for postcards, posters, books, and color box packaging.

Product Overview

Professional Vertical Laminating Solution

This vertical laminating machine is engineered for high-performance processing of OPP, PET, thermal, and glueless films onto paper substrates. It features advanced pneumatic and hydraulic systems for efficient material handling and consistent tension control. Designed for industrial-scale efficiency, the system integrates a high-precision chrome roller and an energy-saving hot air drying mechanism to ensure superior product quality.

Operational Specifications

Tension Control System

- Magnetic brake for unwinding
- Taper tension control for rewinding

Compatible Film Types

OPP, PET, Thermal Lamination Film, Glueless Film

Loading Mechanism

Hydraulic cylinder automatic loading and unloading

Technical Precision

Gumming Roller Precision

0.008 mm

Maximum Tolerance

Air Shaft Size

3 inch

Heating Technology

Electromagnetic heating for hot pressing roller
