

# Vertical Long Shaft Multistage Impeller Pump

This vertical long shaft pump is designed for drainage and irrigation applications. It features a multi-stage impeller system for efficient pumping of water from deep wells or reservoirs.

## Overview

### JLY Series Vertical Long Shaft Pump

The JLY series vertical long shaft pump is a specialized solution engineered for efficient drainage and irrigation applications. Its multi-stage impeller system is optimized for reliable water extraction from deep wells or reservoirs. The vertical architecture significantly reduces the installation footprint, making it an ideal choice for confined spaces while ensuring robust, long-lasting performance in demanding environments.

## Key Features

### Design Advantages

- Vertical long shaft configuration
- Multi-stage impeller system
- Compact footprint for confined spaces
- Durable construction for harsh environments

### Primary Applications

Agricultural Irrigation, Water Supply, Industrial Drainage

## Technical Specifications

Pump Configuration	Vertical Long Shaft
Impeller System	Multi-stage
