

Vertical Machining Center

This CNC milling machine is used for machining operations, including milling, drilling, tapping, and boring. It features a vertically oriented spindle and a multi-axis table for precise workpiece positioning.

Overview

Vertical Machining Center (VMC)

The Vertical Machining Center (VMC) is a high-precision CNC milling machine engineered for versatile manufacturing tasks including milling, drilling, tapping, and boring. Featuring a vertically oriented spindle and a multi-axis table, it allows for precise positioning of workpieces to ensure consistent machining quality. The unit is fully enclosed with safety doors and includes an integrated control panel for streamlined programming and operation.

Technical Specifications

Model Number	VMC-650
Control System	NC-310
Machining Capabilities	Milling, Drilling, Tapping, Boring

Features

Safety & Design

- Fully enclosed workspace
- Integrated safety doors
- Precision-oriented spindle design
- Multi-axis table movement
