

Vertical Machining Center for Metal Fabrication

This vertical machining center is designed for precision metal cutting and shaping. It features a fully enclosed workspace and a control panel for stable operation during various machining applications.

Overview

Precision Vertical Machining Center

This vertical machining center is engineered for high-precision metal cutting and shaping applications. Featuring a robust frame designed for maximum stability during operation, it ensures consistent performance and accuracy. The unit comes equipped with a fully enclosed workspace to enhance safety and cleanliness, along with an intuitive control panel for streamlined operation.

Key Features

Construction

Vertical Orientation • Fully Enclosed • Robust Frame

Model Designation

V 850

Technical Capabilities

Primary Application

Metal Cutting, Metal Shaping, Precision Machining
