

Vertical Metal Casting and Forging Machine

This vertical machine is designed for efficient metal forming processes. It is suitable for industrial applications requiring precise metal forming.

Overview

Industrial Metal Forming Solution

This vertical metal casting and forging machine is engineered for high-efficiency metal forming processes in demanding industrial environments. Featuring a robust, multi-tiered structural design, the machine ensures stability and precision during operation. It includes multiple access points designed to streamline maintenance tasks and enhance operational safety for professional users.

Technical Specifications

Machine Type	Vertical Metal Casting and Forging
Structural Design	Vertical, Multi-tiered, Robust Frame
Maintenance Access	3 points

Operational Features

Suitable Applications

- Metal Casting
- Metal Forging
- Industrial Metal Forming

Design Highlights

High Precision • Maintenance Friendly • Industrial Grade
