

Vertical Milling Machine

This vertical milling machine features a robust construction for precision machining operations. It is equipped with a multi-axis control system, a high-speed spindle, and a rigid frame to minimize vibration during cutting.

Overview

Precision Vertical Milling Solution

This vertical milling machine is engineered for high-precision machining operations, featuring a robust construction designed to minimize vibration during heavy material removal. It incorporates a high-speed spindle and a multi-axis control system to ensure superior surface finishes across a variety of materials. With an integrated digital display for real-time monitoring and an automatic lubrication system, this machine is optimized for both performance and reduced maintenance requirements.

Technical Specifications

Model Identifier	S-1354B
Machine Type	Vertical Milling Machine

Key Features

Performance Highlights

1 Multi
Axis Control

Machine Capabilities	Multi-axis control, High-speed spindle, Rigid frame construction, Vibration damping, Automatic lubrication
----------------------	--

Maintenance & Monitoring

Monitoring System	Yes
Lubrication System	Automatic
