

Vertical Multistage Centrifugal Pump

This high-pressure vertical multistage centrifugal pump is suitable for water supply, pressure boosting, and industrial liquid transfer. It features stainless steel construction for corrosion resistance and durability.

Overview

High-Performance Vertical Multistage Solution

This vertical multistage centrifugal pump is engineered for demanding industrial and commercial environments, offering reliable pressure boosting and liquid transfer capabilities. Constructed from robust stainless steel, it ensures excellent corrosion resistance and a long service life even in continuous operation. Designed for clean, non-aggressive fluids, this unit is an ideal choice for water supply systems, irrigation, and diverse industrial applications.

Technical Specifications

Design Type

Vertical • Multistage • Centrifugal

Construction Material

Stainless Steel

Fluid Compatibility

Clean fluids, Non-aggressive fluids

Applications

Suitable Applications

- Water supply
- Pressure boosting
- Industrial liquid transfer
- Irrigation
