

# Vertical Multistage Centrifugal Pump

This vertical pump is made of stainless steel for corrosion resistance and durability. It is designed for water boosting, liquid transfer, and pressure maintenance.

## Product Overview

### High-Performance Vertical Multistage Centrifugal Pump

This vertical multistage centrifugal pump is engineered for demanding industrial and agricultural applications, providing reliable pressure boosting and liquid transfer. Constructed with high-grade stainless steel, it ensures excellent corrosion resistance and long-term durability in various environmental conditions. Its robust motor design delivers high efficiency, making it an ideal solution for irrigation, drainage, and municipal water supply systems.

## Technical Specifications

Material Construction	Stainless steel
Pump Configuration	Vertical multistage centrifugal
Fluid Compatibility	Clean water, Light industrial fluids

## Applications

### Suitable Applications

- Water boosting systems
- Liquid transfer
- Pressure maintenance
- Agricultural irrigation
- Drainage systems
- Water supply infrastructure

## Performance Features

### Key Performance Features

Corrosion Resistant • High Efficiency • Robust Motor • High-Pressure Operation
