

Vertical Multistage Centrifugal Pump

This vertical multistage centrifugal pump is a non-self-priming unit designed for diverse applications. Its compact, inline configuration ensures straightforward integration into current systems.

Product Overview

Versatile Vertical Multistage Pump

The TPAM series is a professional-grade, non-self-priming vertical multistage centrifugal pump designed for high-performance fluid handling. Featuring a compact, space-saving vertical design, this pump is optimized for efficient pressure boosting, liquid transfer, and circulation in various industrial, HVAC, and domestic water supply systems. Its robust construction ensures long-term reliability when handling clean or slightly contaminated fluids.

Technical Specifications

Rated Power Output	0.55 kW
Operating Voltage Range	220-280V
Rated Current	2.6 A
Frequency	50 Hz

Construction & Design

Design Advantages

- Vertical, space-saving configuration
- Inline design for simplified piping
- Non-self-priming multistage mechanics
- Robust construction for durability

Key Materials

Stainless Steel Pump Body, Black Motor Housing

Applications

Recommended Applications

HVAC • Water Supply • Industrial Equipment • Construction • Agricultural
