

Vertical Multistage Stainless Steel Pump

This vertical multistage pump is constructed from stainless steel for corrosion resistance and durability. Its close-coupled design allows for compact installation and efficient operation in a variety of applications.

Overview

High-Performance Vertical Multistage Pump

This vertical multistage stainless steel pump is engineered for demanding industrial and municipal applications, offering robust performance for water supply, pressure boosting, and boiler feed systems. Constructed from high-grade stainless steel, it ensures excellent corrosion resistance and long-term durability in diverse environments. Its compact, close-coupled design maximizes installation flexibility, making it an ideal solution for systems requiring high pressure and efficient fluid transfer.

Performance

Maximum Capacity

970 USGPM

Max Capacity

240 m³/h

Max Capacity

Maximum Head

300 m

Operating Conditions

Rotation Speed Options

- 2900 rpm
- 1450 rpm
- 3500 rpm

Max Liquid Temperature

120 °C

Construction

Material Specifications

Component	Material
Casing	Stainless steel / Duplex stainless steel
Impeller	Stainless steel / Duplex stainless steel
Shaft	Stainless steel
Wear ring	Stainless steel

Applications

Suitable Applications

Water Supply, Cooling Systems, Fire Protection, Boiler Feed, Irrigation, General Industry
