

Vertical Plate Lifting Clamp

This vertical lifting clamp is designed for lifting and transporting steel plates and structures. It features a high-strength alloy steel body, a hinged hoisting eye, and a safety lock.

Overview

Vertical Lifting Clamp Overview

The DSQH Model Vertical Lifting Clamp is engineered for the secure lifting and transport of steel plates and structures in a vertical orientation. Built from high-strength alloy steel, this tool ensures durability and reliable performance in demanding industrial environments. It features a hinged hoisting eye for flexible attachment and a dedicated safety lock mechanism to prevent accidental load release during operation.

Technical Specifications

Material	High-strength alloy steel
Lifting Orientation	Vertical
Safety Features	Safety Lock, Hinged Hoisting Eye, Anti-Slippage Mechanism

Applications

Suitable Industries

- Construction
- Steel Fabrication
- Material Handling
