

Vertical Post Insulator

This vertical post insulator is designed for electric power transmission and distribution systems. It provides insulation and mechanical support for high-voltage conductors.

Product Overview

High-Performance Composite Insulators

These pin-type composite insulators are engineered for high-voltage power line service, offering superior performance in demanding environments. They feature excellent hydrophobicity, anti-aging properties, and high resistance to tracking, erosion, and electrical wear. Designed for both durability and ease of installation, these insulators provide high tensile and bending strength while maintaining a lightweight profile. Their installation dimensions are compatible with standard porcelain insulators, ensuring seamless interchangeability in existing infrastructure.

Key Features

Key Features

Hydrophobic, Anti-aging, Erosion Resistant, High Tensile Strength, Lightweight, Interchangeable Design

Technical Specifications

Model Specifications

Model	Voltage (kV)	Mech. Load (kN)	Height (mm)	Insul. Dist. (mm)	Creepage (mm)
FPQ-10/4T20	10	4	215	125	280
FPQ-10/5T20	10	5	250	165	420
