

# Vertical Roller Mill for Industrial Milling

Vertical Roller Mill is a large scale power mill designed to solve the problems of low capacity and high consumption of industry mills. It is used for industrial milling.

## Overview

### High-Efficiency Vertical Roller Mill

This vertical roller mill is engineered for high-performance industrial grinding and milling operations, offering superior energy efficiency and throughput. Designed for heavy-duty applications, it ensures consistent particle size distribution and reliable operation in demanding environments. Its robust construction minimizes maintenance requirements while maximizing output quality, making it an ideal solution for large-scale industrial material processing.

## Performance Metrics

### Grinding Efficiency

**95 %**

Energy Efficiency Rating

**50 t/h**

Throughput Capacity

## Technical Specifications

### Standard Dimensions

Component	Specification
Roller Diameter	1200 mm
Table Diameter	2500 mm
Total Height	6500 mm

Mill Type	Vertical Roller Mill
Operation Mode	Continuous
Compatible Materials	Cement Clinker, Coal, Slag, Limestone
Drive System	Planetary Gearbox

## Compliance & Quality

### Certifications

ISO 9001 • CE Certified • Safety Standard Compliant

## Key Features

### Core Advantages

- Low noise operation
- Automatic lubrication system
- Easy maintenance access
- High reliability in continuous duty
