

Vertical Roller Mill Tyre for Cement Plant

This vertical roller mill tyre is designed for use in cement plant raw mills and cement mills. Made from high chrome material with hardfacing, it ensures efficient grinding and long-lasting performance.

Overview

High-Performance Vertical Roller Mill Tyres

These wear-resistant roller tyres are engineered for critical grinding operations in cement and electric power plants. Designed to replace imported components, they offer a lifespan approximately 10% longer than standard domestic alternatives, providing exceptional price-to-performance value. These parts are suitable for a wide range of international mill types and can be customized to meet specific industrial requirements.

Technical Compatibility

Supported Mill Types	ATOX, LM, MPS, RM, CKP, MLS, MPF, TRM, HRM, ZGM, HP
Customization	Yes

Performance & Quality

Lifespan Advantage

Material Characteristics

High Chrome • Wear-Resistant • Industrial Grade

Application

Target Industries

- Cement Production
- Electric Power Generation
- Mining Machinery
- Raw Material Grinding

Global Reach

Export Destinations	Germany, Russia, Pakistan, Argentina, Greece, Denmark, Colombia, Costa Rica
