

Vertical Rubber and Plastic Cutting Machine

This vertical cutting machine is engineered for processing rubber and plastic materials. It features a cylindrical roller and a safety cage, suitable for industrial applications.

Product Overview

Industrial Precision Cutting

This vertical cutting machine is engineered specifically for processing coiling, hanging plastic flaps, and plastic canvas materials. It is designed to optimize industrial workflows by significantly reducing manual labor requirements while maintaining high operational efficiency. The robust construction ensures reliable performance in demanding rubber and plastic manufacturing environments.

Operational Benefits

Operational Advantages

1 Low

Energy Consumption

2 Reduced

Labor Requirement

Key Features

Operational Highlights

- Low energy consumption design
- Convenient and easy maintenance protocols
- Simple operation for workforce efficiency
- Minimized manual labor dependency

Application Details

Compatible Materials

Rubber, Plastic, Coiling Flaps, Plastic Canvas
