

Vertical Rubber Injection Molding Machine

This vertical injection molding machine is designed for rubber processing. It features a robust frame, a molding unit with a safety door, and a control panel.

Overview

High-Efficiency Vertical Injection Molding

This vertical rubber injection molding machine is engineered for precision and durability in high-demand industrial rubber processing applications. It features a robust, stable frame design with an integrated, intuitive control interface for streamlined operation. Equipped with advanced monitoring status indicators, it provides a reliable solution for consistent, high-quality molding performance.

Machine Configuration

Safety Systems

- Transparent safety door
- Multi-tiered signal status tower
- Hardened structural frame

Machine Type	Vertical, Rubber Processing
Control Interface	Digital display unit with integrated command panel and pressure gauges
