

Vertical Rubber Injection Molding Machine

This vertical rubber injection molding machine is designed for precision rubber component manufacturing. It features a robust frame, advanced hydraulic system, and programmable logic controller (PLC) for automated operation.

Overview

Precision Vertical Rubber Injection Molding

This vertical rubber injection molding machine is engineered for high-precision rubber component manufacturing. It integrates a robust frame with an advanced hydraulic system and a PLC for fully automated, reliable operation. The machine is designed to maximize production efficiency while minimizing material waste, making it an ideal choice for complex rubber part manufacturing.

Technical Features

Control System	Programmable Logic Controller (PLC) with user-friendly interface
Temperature Control	Multi-zone temperature control system

Safety and Operation

Safety Equipment	Safety Light Curtain, Operator Protection
------------------	---

Performance

Key Capabilities

- Automated operation sequence
- Real-time process monitoring
- High-precision component forming
- Optimized material waste reduction
