

Vertical Single Roller Rice Whitener

This vertical single roller rice whitener is designed for efficient and uniform whitening of rice grains. Equipped with precise control systems, it allows for fine-tuning of the whitening process to achieve desired levels of whiteness and polish.

Product Overview

Professional Rice Whitening Performance

This vertical single roller rice whitener is engineered for high-efficiency, uniform whitening of rice grains in industrial processing environments. Its robust construction ensures long-term durability, while the precision-engineered single roller mechanism maximizes yield by minimizing grain breakage. Integrated control systems allow operators to fine-tune the whitening process, consistently delivering the desired level of polish and quality.

Technical Features

Performance Metrics

1 unit

Roller Count

Whitening Process

- Uniform whitening application
- Gentle grain handling
- Minimized breakage rates
- Adjustable whitening intensity
