

Vertical Ultrafine Pulverizer for Powder Production

This vertical ultrafine pulverizer is a high-efficiency grinding machine for producing fine powders. It utilizes a vertical structure with a rotating grinding table and rollers to ensure uniform particle size distribution.

Product Overview

High-Efficiency Vertical Pulverizing

The SWFL Series Vertical Ultrafine Pulverizer is a professional-grade grinding solution engineered for precision powder production. Utilizing a vertical grinding table and roller mechanism, it ensures consistent particle size distribution across diverse applications including minerals, chemicals, and food processing. The integrated air classifier system offers superior control, while the machine's robust design minimizes energy consumption and simplifies maintenance for industrial environments.

Key Features

Operational Highlights

- High-efficiency vertical grinding architecture
- Precise particle size control via air classification
- Low energy consumption design
- Dust-free operating environment
- Simplified maintenance protocols

Application Scope

Suitable Materials

Minerals, Chemicals, Food Products

Technical Standards

Equipment Type

Vertical Grinding • Ultrafine Pulverizer
