

Vertical Water Source Heat Pump for Climate Control

High-efficiency vertical water source heat pump designed for heating and cooling applications. It incorporates advanced heat exchange technology for superior performance and energy efficiency.

Product Overview

High-Efficiency Climate Control

This vertical water source heat pump is engineered to provide superior heating and cooling performance for diverse commercial and residential environments. Featuring a space-saving, compact design, the unit integrates advanced heat exchange technology to maximize energy efficiency. Its robust construction ensures long-term reliability and operational stability across varied installation conditions.

Key Features

Key Benefits

- Optimized compact vertical design
- Advanced heat exchange technology
- Easy connection to water systems
- Durable construction for various conditions

Performance

System Compatibility

Heating Mode • Cooling Mode

Ideal Applications

Commercial, Residential
