

Vibrating Plate Compactor with Reversible Hydraulic System

This vibrating plate compactor features a ductile iron base plate for durability. Its hydraulic system allows for both forward and reverse operation.

Overview

High-Efficiency Compaction Solution

This vibrating plate compactor is a robust and powerful machine engineered for professional-grade compaction of soil, gravel, and asphalt. Featuring a reversible hydraulic system, it provides high compaction force and maneuverability, making it an ideal choice for foundation preparation, road repairs, and trench compaction. Its heavy-duty construction ensures reliability and optimal results in demanding construction and landscaping environments.
