

Vibrating Screen Separator

This construction machinery is a vibrating screen separator, designed for separating materials of different sizes. It features multiple screening decks with individual outlets, powered by an electric vibrator motor.

Product Overview

High-Efficiency Vibrating Screen Separator

This vibrating screen separator is engineered for precise material classification and separation by size. Constructed from durable stainless steel, it features a multi-deck design that allows for efficient processing and distinct material output streams. It is powered by a robust electric vibrator motor and includes integrated electrical controls for reliable, consistent operation in industrial environments.

Technical Specifications

Material	Stainless Steel
Motor Type	Electric Vibrator Motor
Screen Decks	3 decks

Features

Key Features

- Multi-deck separation
- Individual material outlets
- Integrated electrical control box
- Heavy-duty support frame

Suitable Applications	Material Sizing, Industrial Separation, Screening
