

Vibration Dampening Water Pump

This vibration dampening pump is a specialized water pump designed for applications where vibration and noise reduction are critical. Its compact size and mounting bracket allow for easy installation in various HVAC&R systems.

Product Overview

Vibration Dampening Water Pump (VM80-1)

The VM80-1 is a specialized water pump engineered specifically for applications where minimizing operational noise and vibration is critical. Featuring a robust metallic housing for enhanced corrosion resistance and durability, this submersible unit is built for reliable performance in sensitive environments. Its compact design and integrated mounting bracket allow for seamless installation within various HVAC&R systems.

Technical Specifications

Model Number	VM80-1
Housing Material	Aluminum, Stainless Steel
Operation Type	Submersible
Noise & Vibration Control	Yes

Installation

Mounting Method	Integrated mounting bracket
Power Connection	Hardwired cable included

Application

Recommended Environments

- HVAC Systems
- Refrigeration Systems
- Sensitive noise-controlled environments
