

Vibration Shielding Pump

This vibration shielding pump minimizes vibration during operation, ensuring stable and accurate performance. It is suitable for applications requiring low noise and minimal disturbance.

Product Overview

Vibration Shielding Pump QU-180

The Vibration Shielding Pump QU-180 is engineered to minimize vibration during operation, ensuring stable and highly accurate performance. It features robust construction combined with advanced shielding technology to isolate vibrations effectively. This unit provides reliable fluid transfer with precise control, making it an ideal solution for sensitive laboratory equipment and other vibration-critical systems.

Technical Specifications

Model	QU-180
Key Features	Low Vibration, Low Noise, Stable Operation, Compact Design

Application Suitability

Typical Applications

- Laboratory equipment
- Precision instruments
- Vibration-critical systems
- Fluid transfer operations
