

Vibration Shielding Pump

This vibration shielding pump is designed to minimize noise and extend the lifespan of the unit. Constructed with durable materials, it offers reliable performance in demanding environments.

Overview

Professional Fluid Transfer Solution

The Vibration Shielding Pump QU-180B is engineered for reliable fluid transfer in both industrial and residential settings. Its signature vibration-dampening design significantly reduces operational noise while enhancing the longevity of the unit. The compact, robust construction ensures it fits easily into confined spaces without sacrificing performance, while integrated thermal overload protection maintains safe and consistent operation.

Technical Specifications

Safety and Maintenance

- Thermal overload protection system
- Vibration-dampening chassis
- Easy-access maintenance points

Performance Advantages

Noise reduction • Extended service life • Space-saving design • Low operational cost

Suitable Applications

Water pumping, Wastewater management, Non-corrosive liquids, Industrial use, Residential use
