

Vibration Shielding Submersible Pump

This submersible pump features a vibration-shielding mechanism. Its robust motor and durable housing ensure a long operational life, and it includes a screened base to prevent debris from entering.

Product Overview

Vibration Shielding Submersible Pump QU-240

The QU-240 is a specialized submersible pump engineered with an integrated vibration-shielding mechanism for enhanced operational stability. Built with a robust motor and high-durability housing, this pump is designed to withstand demanding environments for extended service life. It is equipped with a protective screened base to prevent debris intake, making it a reliable solution for drainage and sewage pumping applications.

Technical Specifications

Design Features

- Vibration-shielding mechanism
- Robust motor construction
- Durable outer housing
- Integrated debris screening base

Primary Applications

Drainage, Sewage, Submersible Operations
