

Video Editing and Production Hardware Suite

This comprehensive suite includes I/O boxes, breakout boxes, and video processing cards. It is designed for professional video editing, compositing, and broadcast applications, offering real-time effects and multi-layer editing.

Overview

Professional Video Production Suite

This comprehensive hardware suite is engineered for high-end video editing, compositing, and broadcast applications. It provides essential connectivity and processing power through advanced I/O boxes and video processing cards. Designed for demanding workflows, the system supports real-time effects, multi-layer editing, and high-resolution video processing to maximize production efficiency.

Technical Capabilities

Key Workflow Features

- Real-time video effects processing
- Multi-layer video editing support
- High-resolution format compatibility
- Accelerated rendering capabilities

Primary Applications

Professional Editing • Compositing • Broadcast Production

Connectivity

Connectivity Options

Analog Video I/O, Digital Video I/O, Audio I/O, Breakout Box Expansion
