

Video Processing Circuit Board

This circuit board is designed for video processing. It features various electronic components, including integrated circuits and connectors.

Product Overview

High-Performance Video Processing

This video processing circuit board is engineered for reliable signal handling and display output in electronic systems. Featuring a standard green solder mask and integrated circuit architecture, it is designed to facilitate seamless video signal conversion and management. The board includes essential connectivity options such as VGA and RCA, making it a versatile component for display-centric applications.

Technical Specifications

Connectivity Interfaces

- VGA
- RCA

Key Features	Video Processing, Signal Conversion, Display Output Support
Marking Code	MDT
