

Video Surveillance Management Software

This software provides a comprehensive solution for managing video surveillance systems. It allows users to monitor live camera feeds, control camera settings, and review recorded footage.

Product Overview

Professional Surveillance Management Solution

The EV-J3000 video surveillance software provides a comprehensive management interface for monitoring security feeds in real-time. Engineered for efficiency, the system supports multi-threaded recording and detailed device control, including pan, tilt, and zoom functionality. It offers a robust administrative environment, perfect for centralized control rooms and professional security operations.

System Capabilities

System Performance

1 Admin Level

User Access

Supported Functions

Live Camera Feed, Multi-threaded Recording, PTZ Controls, System Status Monitoring, Playback Management

Technical Details

Process Specifications

- Multi-threaded recording enabled
- Real-time system health logging
- Date and time synchronized timestamping
- Unified camera control panel

Network Configuration
