

Wafer Lug Butterfly Valve DN40-DN300

This valve is designed with a wafer and lug design and alignment holes for simplified installation. It is available in sizes ranging from DN40 to DN300 and is suitable for controlling the flow of liquids and gases.

Product Overview

High-Performance Butterfly Valves

This resilient seated butterfly valve is designed for reliable flow control of both liquids and gases across a wide range of industrial applications. Featuring a versatile wafer and lug design with integrated alignment holes, it ensures easy installation and precise positioning. Constructed from durable materials, these valves are engineered to provide long-lasting performance and efficient operation with minimal pressure drop in demanding environments.

Technical Specifications

Size Range

40 DN

Minimum Diameter

300 DN

Maximum Diameter

Design & Construction

Body Style	Wafer, Lug, Alignment Holes
Seat Design	Resilient Seated

Performance

Compatible Media

- Liquids
- Gases

Operational Advantages

- Efficient operation
- Minimal pressure drop
- Durable construction for demanding environments
- Easy installation with alignment holes

Applications

Industrial Applications

Flow Control • Industrial Processing • General Utility
