

Walk-Behind Concrete Power Trowel

This walk-behind power trowel is designed for smoothing and finishing concrete surfaces. It features a gasoline engine, rotating blade assembly with a guard ring, and a long handle for operator control.

Overview

Professional Concrete Finishing

This walk-behind power trowel is engineered for high-efficiency concrete smoothing and finishing tasks. Designed for small to medium-sized projects, it ensures a perfectly level and smooth surface through its robust rotating blade assembly. The ergonomic handle design provides operators with precise control, making it an essential tool for achieving professional-grade results on concrete slabs.

Technical Specifications

Key Design Features

- Enclosed guard ring for safety
- Ergonomic long handle control
- Rotating blade assembly

Power Source	Gasoline Engine
Primary Application	Concrete Finishing, Surface Smoothing, Leveling
