

Walk-Behind Core Lawn Aerator

This lawn aerator addresses soil compaction, which restricts grass root respiration. It aerates the soil, enhancing drainage and alleviating compaction, while also breaking down old roots to stimulate new growth.

Product Overview

Professional Lawn Aeration Solution

This walk-behind core lawn aerator is engineered to tackle soil compaction, a common issue that restricts grass root development. By effectively aerating the earth, the machine improves drainage and nutrient penetration, creating an optimal environment for healthier turf. It is designed to relieve compaction and break up old roots, promoting vigorous and sustainable grass growth.

Technical Specifications

Model	WB457AB
Engine	12H332 6.5HP
Clutch System	Tensional pulley
Drive System	Belt and chains
