

# Warehouse Inventory Tracking Device

This electronic device is designed for tracking inventory within a warehouse. The handheld system features a screen for displaying product information and a stylus for easy data input.

## Overview

### Smart Inventory Management

This advanced inventory tracking device is designed to streamline supply chain operations and material management. Featuring an integrated stylus and high-visibility digital display, it allows for precise recording of product data, including expiration dates and storage conditions. It is an essential tool for maintaining quality control and efficient inventory tracking in fast-paced warehouse environments.

## Device Features

Input Method	Stylus-based touchscreen interface
Display Capabilities	Real-time tracking, Date recording, Storage condition monitoring

## Application Data

### Key Tracking Metrics

**5 °C**  
Storage Temperature

### Recordable Data Fields

- Product Name
- Production Date
- Expiration Date
- Storage Requirements

## Awards and Recognition

### Awards

2007 Silver Award
