

Washing Machine Agitator P Shaft

This P shaft is a key component for washing machine agitator systems. It is made with durable materials and precise dimensions, including a 10mm diameter, for compatibility with specific washing machine models.

Product Overview

High-Performance Agitator P Shaft

The WJ-228-E P shaft is a critical precision-engineered component designed specifically for washing machine agitator and impeller systems. It facilitates the efficient transmission of rotational motion, ensuring reliable and consistent operation under the rigorous demands of a wet, high-stress laundry environment. With its optimized 10mm diameter design, this shaft provides a secure fit and durable power transfer for seamless appliance functionality.

Technical Specifications

Model Identifier	WJ-228-E
Shaft Diameter	10 mm
Design Features	Rotational motion transmission, Corrosion resistant, High-stress durability, Precision engineering

Application

System Compatibility

- Washing machine agitator systems
- Impeller mechanisms
