

Washing Machine Agitator Pulley

This white plastic agitator pulley is designed for use in washing machines. The pulley transfers rotational motion to the agitator, which facilitates the cleaning process.

Product Overview

Professional Agitator Component

The WJ-261 agitator pulley is a precision-engineered component designed to facilitate the rotational motion required for effective washing machine cycles. Constructed from high-durability plastic, it ensures long-term reliability and resistance to mechanical wear. Its specific design allows for seamless integration into existing agitator systems, ensuring optimal operational efficiency.

Technical Specifications

Model Number	WJ-261
Diameter	115 mm
Bore Diameter	12 mm
Material Composition	Durable High-Grade Plastic
Design Features	3-Spoke Design, Engagement Tabs, Wear Resistant
