

Washing Machine Brushless DC Motor

This is a drum washing machine component with a brushless DC motor. It is part of the machine's drive system and rotates the drum.

Product Overview

High-Efficiency Brushless DC Motor

This brushless DC motor is a specialized drum washing machine component designed for reliable drive system performance. It features a robust circular housing with integrated ventilation to ensure optimal thermal management during operation. Engineered for precision, this motor provides the efficient and controlled rotation necessary for modern washing cycles.

Technical Specifications

Motor Technology

Brushless DC (BLDC) • Direct Drive Compatible

Primary Application

Drum Washing Machine Drive System

Reference Codes

410124

Design & Construction

Housing Characteristics

- White circular protective housing
- Integrated ventilation openings for cooling
- Pre-drilled mounting points for secure attachment
- Internal motor integration

Performance Highlights

Performance Features

1 BLDC

Motor Type
