

Washing Machine Clutch Assembly

This washing machine clutch assembly is designed for top-load washing machines. It facilitates the engagement and disengagement of the motor's power to the washing machine's agitator and spin basket.

Product Overview

Professional Clutch Assembly

This high-quality washing machine clutch assembly is engineered to facilitate seamless engagement and disengagement between the motor and the agitator or spin basket. Designed specifically for top-load washing machines, the unit features a durable combination of metal components and precision plastic gears. Its robust linkage mechanism ensures efficient torque transfer and reliable performance across various wash and spin cycles.

Technical Specifications

Capacity Rating

10 KG

Load Capacity

Compatibility

- Top-load washing machine designs
- JN-10KG standard models
- General agitator drive systems

Material Composition

Durable Metal, Industrial Plastic

Key Features

Operational Benefits

Smooth Operation • Efficient Torque Transfer • Reliable Longevity
