

Washing Machine Clutch Assembly

This washing machine clutch assembly is engineered for efficient power transmission and smooth operation. It ensures reliable engagement and disengagement during the washing cycle, contributing to the washing machine's overall performance and longevity.

JN-50-I

Product Overview

Professional Grade Clutch Assembly

This washing machine clutch assembly is engineered for high-performance power transmission, ensuring consistent operation throughout every wash cycle. Built with durable materials and precise mechanical tolerances, it facilitates smooth engagement and disengagement to optimize torque transfer. This robust component is designed to reduce wear and tear, effectively extending the service life of the appliance.

Technical Specifications

Model Identifier	JN-50-I
Key Features	High Torque Transfer, Wear Resistant, Precision Engineered, Reliable Engagement
General Compatibility	Suitable for a wide range of standard washing machine models
