

Washing Machine Component Moulds

Moulds are used in the manufacturing of washing machine components. They are available for top-loading, front-loading, compact, and portable washing machine models.

Product Overview

Precision Washing Machine Component Moulds

These high-quality industrial moulds are specifically designed for the large-scale production of washing machine components. Compatible with both top-loading and front-loading systems, as well as compact and portable configurations, these tools ensure consistent precision. Built for high-volume manufacturing environments, they provide the durability and engineering reliability required for modern appliance assembly lines.

Technical Specifications

Available Mould Models

- mould_325
- mould_326
- mould_327
- mould_328
- mould_329
- mould_330

Application Compatibility

Top-loading, Front-loading, Compact, Portable

Production Features

Key Production Attributes

High-volume compatible • Precision engineering • Durable construction
