

# Washing Machine Computer Control Board

This washing machine computer control board is designed to manage the functions of a washing machine. It features a digital display, multiple input/output connectors, and a microcontroller.

## Product Overview

### Versatile Electronic Control

This universal electronic control board is designed for efficient management of washing machine operations. It features a modern digital display with LED indicators for precise monitoring and user interaction. Equipped with advanced functions like imbalance correction and water recycling, it provides both performance and utility for automated laundry systems.

## Technical Features

### Integrated Functions

- Digital display with LED status indicators
- Multiple customizable wash programs
- Electronic water level control with infinite level selection
- Memory function for recalling last selected program
- Automatic and manual water replenishment
- Imbalance correction system
- Water recycling capability

### Supported Models

4888-05, 4888-06

## Certifications

### Certifications

CE, RoHS, ISO9001:2000
