

Washing Machine Drain Motor Controller

This controller unit manages the drain motor functions in a washing machine. It regulates the activation and deactivation of the drain motor to efficiently remove water from the washing tub.

Product Overview

High-Performance Drain Motor Controller

This washing machine drain motor controller is designed to manage drainage functions efficiently throughout the washing cycle. It features a durable black plastic housing and color-coded wiring for straightforward integration. Engineered for reliability, this unit ensures precise activation and deactivation of the drain motor to remove water from the tub effectively.

Technical Specifications

Wiring Configuration

- Red lead wire
- Blue lead wire

Model Number	PQD0709E
Application	Washing Machine

Compliance & Quality

Certifications	VDE, CE, RoHS Compliant
