

# Washing Machine Drive Shaft

This P shaft component is designed for washing machine drive systems. It transmits power from the motor to the agitator or drum.

## Product Overview

### High-Performance Drive Shaft

The WJ-225-B is a precision-engineered P shaft component designed specifically for washing machine drive systems. This critical transmission part effectively translates motor power into drum or agitator motion, ensuring consistent performance. Built from durable, high-strength materials, it is engineered to withstand the rigors of high-torque washing cycles while maintaining smooth operation and long-term reliability.

## Technical Specifications

### Design Features

- Multi-tiered diameter profile
- Top integrated flange/impeller structure
- Bottom secure coupling hole
- Precision-engineered for high torque

Model Identifier	WJ-225-B
Component Type	P Shaft / Drive Shaft
Usage Environment	Washing Machine Transmission, Motor Power Transmission, Agitator System
